
QUIET Can Be Very Important.

While they are the affordable choice, most chain drive garage door openers are noisy, rattling the whole house as they open and close. Our competitors say they make a chain drive that's quiet. But what they really mean is that their opener is less loud than it used to be.

Marantec's chain and belt drive garage door opening systems are what we say they are: strong, well-engineered units that are genuinely quiet. At Marantec, when we say quiet, we mean it.
